

PVC COATED Weldable Webbing

Add Flexible Strength to Vinyl Fabrics

Curtainside Trailers, Tarpaulins, Signs, Banners, Billboards, Tents, Tension Structures, Awnings, Inflatable Structures, Pool Covers, Field Covers, Environmental Barriers.

Non-wicking *Weldable Webbing* is tightly woven polyester (PET) webbing fully coated and impregnated with thermoplastic vinyl (PVC). Proven in the European curtainside trailer industry, and now widely accepted in the North American fabric structure, tent, tarp, sign, and banner industries, PVC-Coated Webbing achieves maximum-strength welds using **hot air, hot wedge, or high frequency welding**. It can be bonded using vinyl-solvent adhesives. And, as a textile product, it can be sewn.
